Unit - Ratios and Proportions
Real World Applications with Proportions

By the end of this lesson you will be able to $\qquad$

## Example 1 - Scale Maps and Drawings

[Fill in the missing information]
The distance between Raleigh, NC and Asheville, NC on the map is $\qquad$ . The scale for the map is $\qquad$ How many miles is it between these two cities?

What two units are being compared in the problem?

What proportion can be used to solve this problem?
[Show your work using cross products to solve for the missing value]

What is the distance between the cities? Write your answer in a complete sentence.

## Example 2 - Indirect Measurement

[Fill in the missing information]
Susie is standing next to a tree that has a shadow measuring $\qquad$ long. Susie's shadow is
$\qquad$ long and she knows she is 5 feet tall. How tall is the tree?

What two units are being compared in the problem?

What proportion can be used to solve this problem?
[Show your work using cross products to solve for the missing value]

What is the height of the tree? Write your answer in a complete sentence.

## Example 3 - Converting Customary Measures

[Fill in the missing information]
Francis claims he weighs $\qquad$ . Greg says he weighs $\qquad$ . Which boy weighs more?

What two units are being compared in the problem?

What two proportions can be used to solve this problem?
[Show your work using cross products to solve for the missing value in both proportions]

What is the weight of both boys in ounces and in pounds? Write your answers in complete sentences.

## Your Turn to Practice

Fill in the missing parts of each question from the video. Use a proportion to solve each problem. Write your answers in complete sentences.

1) Two cities on a map are 5 inches apart. The scale for the map says $\qquad$ How many miles apart are the two cities?
2) An 18-foot tree casts a 32-foot shadow. If Leslie is standing next to the tree and she is $\qquad$ -. How long will her shadow be? Round your answer to the nearest tenth.
3) The Guinness Record Books says the longest phone call is $\qquad$ How many hours is this record?
